Foreign Population by Origin

# INITIAL FINDINGS : LOOKING AT THE KEY METRICS OF MADRID

## Neighbourhood by Neighbourhood

# ANALYSIS OF MADRID'S KEY FUNDAMENTAL METRICS

---

\*\*Madrid has a Total Population of 3.18 Million residents

\*\* It has a total of 21 Districts, 128 Neighbourhoods

\*\* For every 29, 737 Births, there's 27,757 Deaths with a Natural Population Increase of 1,980

\*\* Almost 88% of the population are Spaniards or Spanish-born.

\*\*The non-Spaniard population of Madrid comprises mainly of Latin American & Caribbean Origin

\*\* 15% of the population originates from Asia & the Oceania (AUS,NZ,Fiji,Tahiti,Samoa), 12% are EU residents and 9% are Africans

NOTE: I derived this data from the screenshot prior to this slide. I simply utilized a 'sniping tool' and focused on the Key Metrics on the left side of the Tableau dashboard. No specific adjustments to the Level of Detail nor granularities were done.

Relation between house prices (€/m2) in 2015 and passenger cars per 100 inhabitants

KEY INSIGHT # 1: The Chamartin District has the highest AVG 2nd hand housing price: 3,643 , with 53 cars per 100 residents

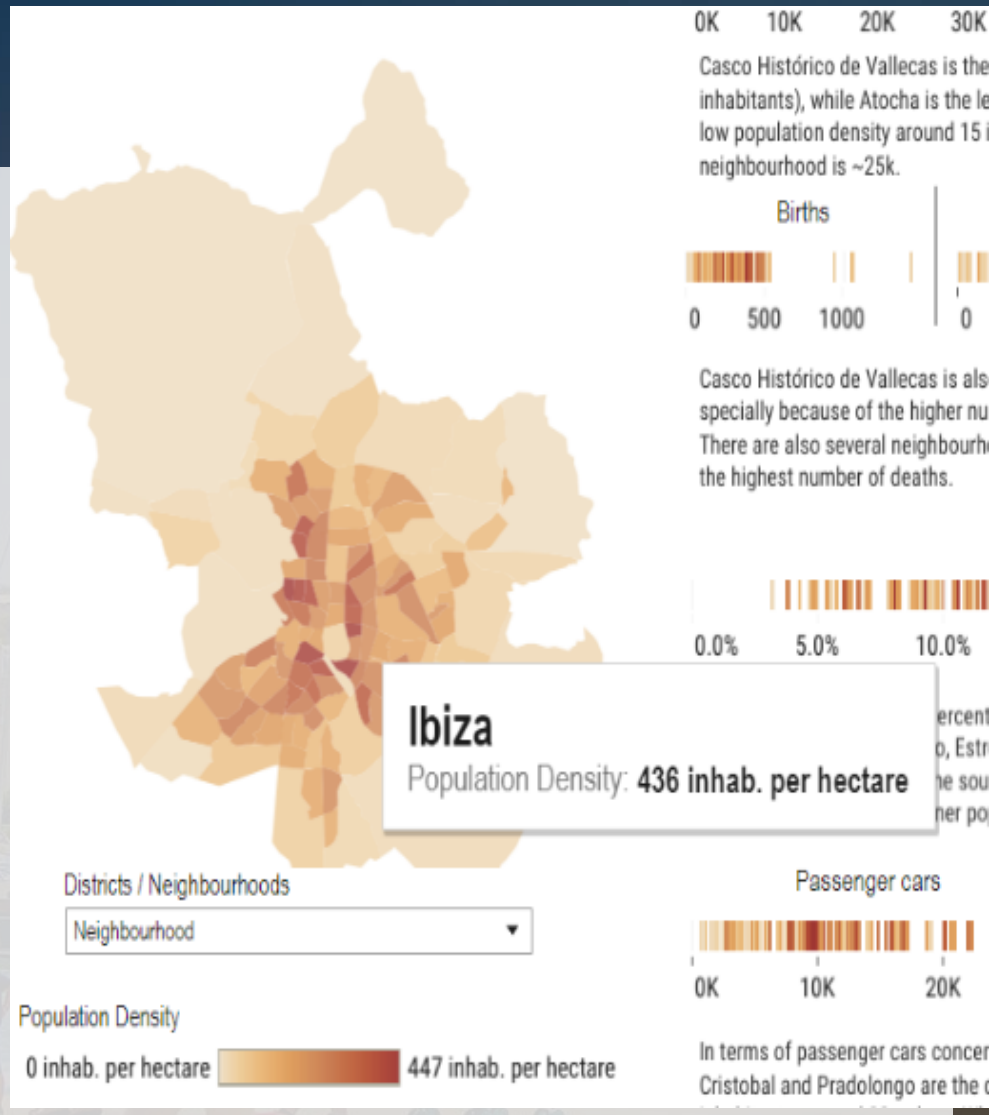

\*\* I derived the data from the above visualization. I simply clicked on the lowest part of the dashboard and chose the top which happened to be 'Chamartin'

**KEY INSIGHT # 2 : THE  
NEIGHBOURHOOD of EL  
PARDO has  
ZERO inhabitants per  
hectare**

\*\* I derived the data by clicking on the map at the middle of the dashboard. I chose the 'neighbourhood granularity' and I chose 'El Pardo'

## KEY INSIGHT # 3 : ‘Party Town’ Ibiza HAS 436 inhabitants per hectare

\*\* I derived this information by clicking on the map at the middle of the dashboard. I chose Ibiza as my ‘target city’

Relation between house prices (€/m2) in 2015 and passenger cars per 100 inhabitants

**KEY INSIGHT # 4: The neighbourhood of Recoletos has the highest AVG of 2nd hand housing price with 5,843 while San Cristobal has the lowest AVG of 2nd hand housing with 925.**

\*\* This data was derived by changing the granularity from 'district' to 'neighbourhood'. Then I used the bar chart at the bottom and I then sorted the values on the right hand side( 2nd hand housing price). I sorted it by ASCENDING (ASC).

Relation between house prices (€/m2) in 2015 and passenger cars per 100 inhabitants

**KEY INSIGHT # 5: The neighbourhood of Recoletos has the highest cars per 100 inhabitants with 88 while San Cristobal has the lowest number of cars per 100 inhabitants with 25. This has a STRONG INDICATION that the higher the AVG 2<sup>nd</sup> hand housing price becomes, the higher the # of cars per 100 residents.**

\*\* This data was derived by changing the granularity from 'district' to 'neighbourhood'. Then I used the bar chart at the bottom and I then sorted the values on the right hand side( 2nd hand housing price). I sorted it by ASCENDING (ASC).
